TST40/45/56

Bei der Modellreihe TST handelt es sich um Aluminiumprofile zur Fertigung von FRAMELESS Zargen für den Massiv- und Trockenbau für in die Leibung öffnende als auch stumpf einschlagende Türen. Je nach Modell kann die entsprechende Zarge mit einer Türblattstärke von 40, 44/45 und 56 mm verbaut werden.

Die Aluminiumprofile werden auf Kundenwunsch angefertigt und, mit den entsprechenden Bohrungen für Scharniere und Schließblech, in Gehrung geschnitten angeliefert. Diese sind mit einer Schutzfolie versehen, werden im Set verpackt und inkl. aller Montage- und Befestigungsteile angeliefert.

Die Türprofile bestehen aus einer rohen unbehandelten Aluminiumlegierung. Zement und seine Derivate produzieren, bei Nässe, alkalische Substanzen welche, wenn man diese auf der Oberfläche der Aluminiumlegierung arbeiten lässt, zu Korrosion führen kann. Deshalb wird empfohlen die Profile immer frei von Zement, Kleber und Fugenmaterial zu halten. Die Korrosion wird durch die empfohlene bauseitige Grundierung und Lackierung des Profils in Wandfarbe verhindert.

Il modello TST è un profilo d'alluminio per porte a filo muro del tipo FRAMELESS per strutture massicce ed a secco per porte a spingere ed a tirare. Secondo il modello scelto sono possibili ante da 40, 44/45 e 56 mm.

Il telaio della porta viene prodotto secondo le esigenze del cliente come l'altezza, larghezza, spessore battente, numero delle cerniere, modello di cerniera e scontro per serratura. I profili sono muniti di una pellicola di protezione e vengono confezionati come kit, inclusi tutti gli accessori per un semplice e rapido montaggio.

I nostri profili porta consistono d'alluminio grezzo, non lavorato. L'alta umidità del cemento e dei suoi derivati producono sostanze alcaline che possono causare corrosioni. Per evitare questo consigliamo di tenere i profili sempre liberi di cemento, colle e altre sostanze corrosive. La corrosione può essere evitata anche verniciando i profili con delle apposite lacche. Tuttavia l'alluminio non è resistente a tutte le composte chimiche.

The aluminium profiles TST are used to create FRAMELESS doors for solid and dry constructions for inswing and outswing doors. Depending on the door type the frame can be installed with 40, 44/45 and 56 mm door leaf thickness.

The TST profiles are supplied mitre-cut to suit door size and milled to suit hidden hinges and striking panels as well as other hardware. All profiles are covered by a protective film and packed/delivered in a kit including the mounting- and fixing accessories.

The door profiles are made out of raw untreated aluminium. Cement and his derivatives produce alkaline substances when getting wet, which can provoke corrosion if they have time to work on the surface of the aluminium alloy. We recommend to keep the profiles clear from cement, glue and joints material. The above mentioned corrosion will be prevented by the recommended priming and finishing of the profiles in wall colours.

- 1**
- DE Eckverbinder bis zum Einrasten einschieben und Türzarge zusammensetzen (Detail A)
 - IT Inserire gli angolari ed assemblare il telaio (dettaglio A)
 - EN Insert the corner connector until they snap-in and assemble the door frame (detail A)

- DE 4 mm Sechskantschlüssel
- IT 4 mm brugola
- EN 4 mm hexagonal wrench
